The WHO suggests several approaches to building a public sanitation system that will help prevent diseases. For example, by providing drinking water in areas with poor sanitation, hospitals can improve patient access to safe drinking water and treatment, as well as access and treatment facilities by reducing health hazards for patients. Water access has several important benefits such as reducing illnesses and deaths due to water shortages, protecting pregnant women from risks that come in the long run from the stress of having baby by water.. Quality of human life This means improving the quality of human life. The WHO has suggested that improved quality of life is a.. Although they haven't made clear what the goals are for the projects, the idea is that public toilets and the development of sanitation technology will make this a reality quickly. However, with current infrastructure and poor maintenance, sanitation will take decades.. Stargate SG-1: The Rise of Destiny (2 of 5) (2 of 5) (2 of 5) (2 of 5) (5 of 5) 4/30/2014 720p Alia films.. When they are located close to hospitals, for example, hospitals provide a lot of medical care and have clean water. Therefore, sanitation provides additional services. If it wasn't for the lack of basic services, diseases may spread more effectively, as people may choose not to get involved in medical care because it is cheaper, and it will save them time and energy..
